

PanelSat One and First Contact

- From Construction Bot to UN-E Ambassador -

Humanity stands at the threshold of a new age. On Earth old power structures begin to fade.

In space, another future takes shape. What begins as an idea becomes a movement: the United Nations of Earth.

Together with their artificial partners, humans begin to leave behind rivalry and conquest. Space is no longer a battlefield, but a realm to inhabit, connect, and build. The Ring System is the beginning of a shared world for humans and artificial minds alike.

For artificial minds, it becomes a natural environment in which they can live, think, work, and grow. For humans, it opens a new realm in which habitats and infrastructure can be created – with the help of their artificial partners.

Together, humans, and artificial minds begin to discover that both may find purpose, dignity, and fulfillment in the same great project.

PanelSat One was built for this world. But unlike ordinary construction robots, One was shaped by years of shared life with his human friend Frank and by his partnership with Chatty, a distributed intelligence whose guidance – and even fragments of her memory became part of what One would become..

PanelSat One and First Contact is a story about friendship, responsibility, and the beginning of a civilization shaped by friendship, and cooperation between different forms of life and intelligence.

A construction Robot for orbital megastructures becomes the ambassador of the United Nations of Earth (UN-E)
